The Navier-Stokes Equations: A Classification of Flows and Exact Solutions (London Mathematical Society Lecture Note Series) P. G. Drazin, N. Riley
The Navier-Stokes equations were firmly established in the 19th Century as the system of nonlinear partial differential equations which describe the motion of most commonly occurring fluids in air and water, and since that time exact solutions have been sought by scientists. Collectively these solutions allow a clear insight into the behavior of fluids, providing a vehicle for novel mathematical methods and a useful check for computations in fluid dynamics, a field in which theoretical research is now dominated by computational methods. This 2006 book draws together exact solutions from widely differing sources and presents them in a coherent manner, in part by classifying solutions via their temporal and geometric constraints. It will prove to be a valuable resource to all who have an interest in the subject of fluid mechanics, and in particular to those who are learning or teaching the subject at the senior undergraduate and graduate levels.

From reader reviews:

Kenneth Kelly:

What do you regarding book? It is not important along? Or just adding material if you want something to explain what your own problem? How about your free time? Or are you busy man or woman? If you don't have spare time to do others business, it is make one feel bored faster. And you have time? What did you do? Everybody has many questions above. They need to answer that question simply because just their can do which. It said that about guide. Book is familiar on every person. Yes, it is correct. Because start from on kindergarten until university need this The Navier-Stokes Equations: A Classification of Flows and Exact Solutions (London Mathematical Society Lecture Note Series) to read.

Donna Vazquez:

Reading can called mind hangout, why? Because while you are reading a book especially book entitled The Navier-Stokes Equations: A Classification of Flows and Exact Solutions (London Mathematical Society Lecture Note Series) the mind will drift away trough every dimension, wandering in each aspect that maybe mysterious for but surely will become your mind friends. Imaging just about every word written in a publication then become one application form conclusion and explanation that will maybe you never get just before. The The Navier-Stokes Equations: A Classification of Flows and Exact Solutions (London Mathematical Society Lecture Note Series) giving you a different experience more than blown away your mind but also giving you useful facts for your better life in this particular era. So now let us explain to you the relaxing pattern at this point is your body and mind is going to be pleased when you are finished examining it, like winning a sport. Do you want to try this extraordinary shelling out spare time activity?

Wesley McFarland:

Are you kind of occupied person, only have 10 as well as 15 minute in your day to upgrading your mind skill or thinking skill possibly analytical thinking? Then you are having problem with the book when compared with can satisfy your small amount of time to read it because this time you only find guide that need more time to be examine. The Navier-Stokes Equations: A Classification of Flows and Exact Solutions (London Mathematical Society Lecture Note Series) can be your answer because it can be read by an individual who have those short time problems.

Mary Craine:

Is it anyone who having spare time and then spend it whole day through watching television programs or just resting on the bed? Do you need something new? This The Navier-Stokes Equations: A Classification of Flows and Exact Solutions (London Mathematical Society Lecture Note Series) can be the reply, oh how comes? A fresh book you know. You are thus out of date, spending your time by reading in this brand new era is common not a geek activity. So what these ebooks have than the others?
