Mental Health Medications U.S. Department of Health and Human Services, National Institutes of Health, National Institute of Mental Health
Medications are used to treat the symptoms of mental disorders such as schizophrenia, depression, bipolar disorder (sometimes called manic-depressive illness), anxiety disorders, and attention deficit-hyperactivity disorder (ADHD). Sometimes medications are used with other treatments such as psychotherapy. This guide describes: Types of medications used to treat mental disorders; Side effects of medications; Directions for taking medications; Warnings about medications from the U S Food and Drug Administration (FDA). Choosing the right medication, medication dose, and treatment plan should be based on a person’s individual needs and medical situation, and under a doctor’s care.
